

Exercise 1

Labels and Roles

Step 1: Discuss the screen shot you've received. What objects can users interact with?

Write a label for each different component (whether or not there's a visible label already).

Label 

Street Address

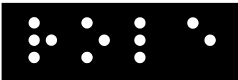

For dynamic sets of items (e.g., cards, carousels), write the source of the label for each item, and how many items there might be in that set (1-5, 6-10, 10+, 25+, 100+...)

Label 

(card title) 10+

Step 2: For each component, take a Role tile and write the correct role from the list provided. Then connect the tiles together.

Tip: Mark any roles that don't match well to a Spectrum component with "?". We'll talk it over!

Role  Text field

Label 

Street Address
